

EDITING WEBSITE IN ATOM

- Open Atom

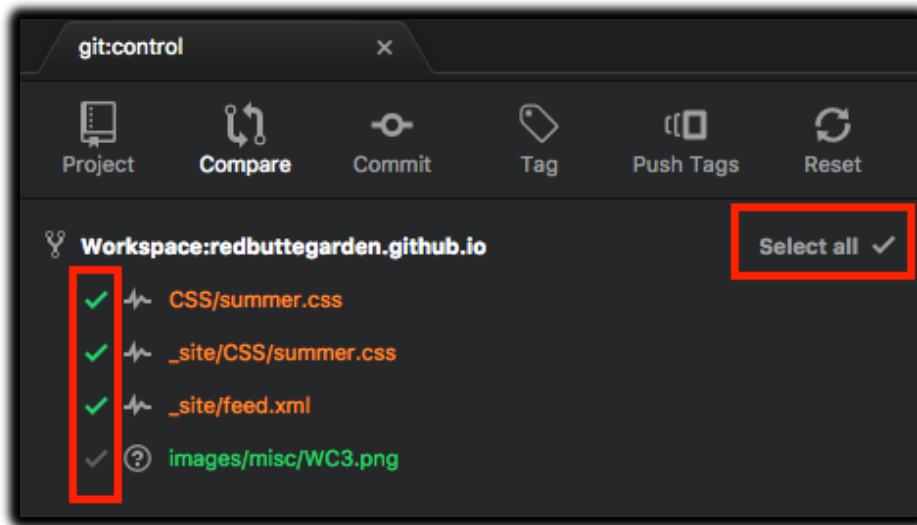

- Make changes and/or add your files to the **website** folder on your machine
- When you are ready to push the changes to the website, click **Packages > git-control > Toggle** at the top of the screen

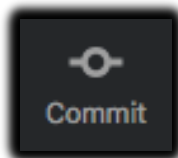

- In the git-control tab, click **Pull** if the button is solid white

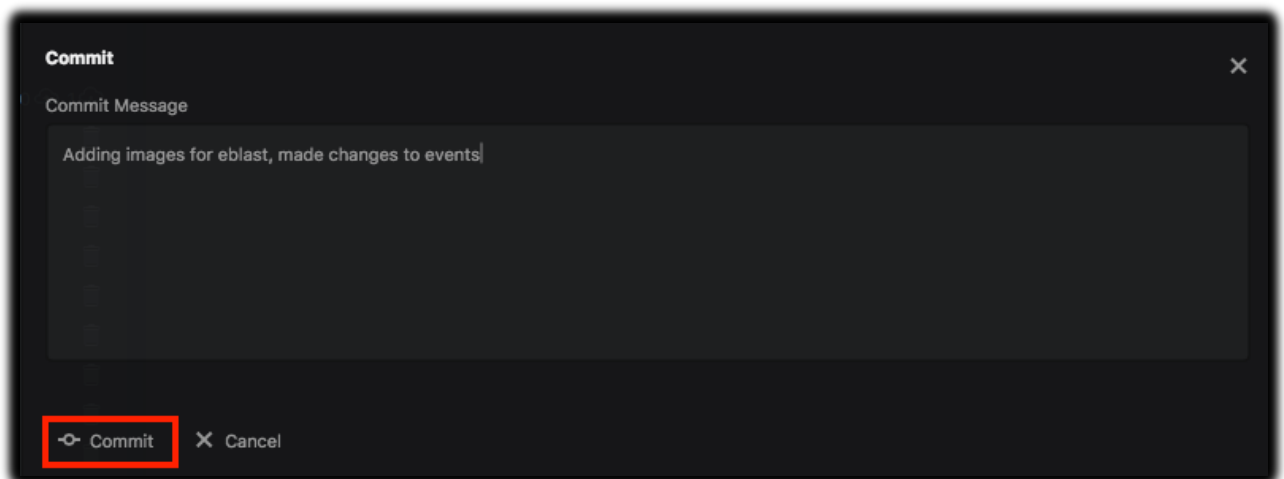

- In the *Workspace* section, ensure that all of the checkmarks are **green**. If they are not, toggle **Select All** until they are

- Click Commit

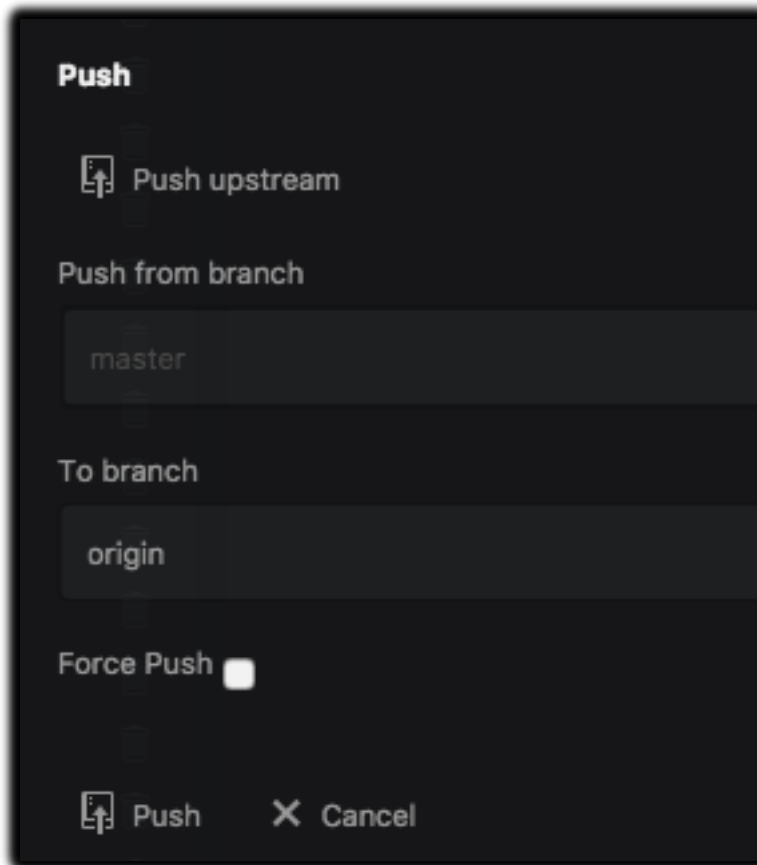

- In the window that pops up, type a message detailing your changes, then click Commit

- When you have committed all of your changes, **click Push**

- **Click Push** again in the window that pops up

- **NOTES:**
 - **You may not be able to Push your changes until you Pull first**
 - **Your changes may take a few minutes to show up on the website**
